

All Men and Women in Our Nation Deserve a Fair Opportunity to Build the Best Life Possible for Themselves and Their Families

A Briefing on Regional Casinos - 2018

SUMMARY

Three Truths About State Government-Sanctioned Regional Casinos

The First Truth: State government-sanctioned casinos lower the standard of living for everyone including those who never gamble.

- There is a direct connection between the widespread promotion and availability of extreme forms of commercialized gambling with the financial hardship and lack of opportunity facing millions of American families today.
- Half of all Americans don't own any assets today: no stocks, no bonds, no real estate. At the same time, the American people lost \$117 billion to state-sanctioned gambling schemes in 2016.
- The economic impact of a slot machine is similar to throwing your money on the street so that someone else can pick it up it's redistributing wealth without creating it.
- Casinos leave behind far more gambling addicts than jobs.
- "You Pay Even If You Don't Play:" For the 2/3 of citizens who never gamble, they end up paying higher taxes for less services and worse state budget problems over the long term. They foot the bill for the inevitable budget deficits produced by state-sanctioned gambling.
- State-sanctioned casinos create unfairness for other businesses.
- All these facts and more explain why a recent statewide poll in New Jersey, a state that has bet big on casinos as much as any state outside of Nevada, revealed that "62% of NJ citizens said gambling has not been good for the state."

The Second Truth: Casinos are predatory.

- A fundamental and irreconcilable conflict exists between the interests of statesanctioned casinos and the public good: the state is charged with protecting the public from the very business practices that generate more revenue for the state. The state's intent has been *to maximize profits, not protect the public interest.*
- It's a mathematically certainty that citizens will lose all of their money the more they continue to use slot machines. At the same time, these gambling machines are designed so citizens cannot stop using them, exploiting aspects of human psychology and inducing irrational behavior.
- Because of the predatory nature of casinos, the health of millions of Americans has been and will continue to be, severely damaged.

The Third Truth: Casinos historically have been illegal in most places because they are a business that profits from fraud.

- The most revealing truth about the fraud behind state-sanctioned casinos is that nearly all of the people who run casinos and the public officials who lobby to bring them in, don't gamble themselves.
- The casino gambling games are based on fraud.
- The casino-promoted image of "responsible gambling" is a sham because the bulk of gambling profits is taken from citizens who are suffering.
- When a practice is fraudulent, its advocates will speak of it fraudulently.
- Any political official who joins with the casino gambling lobby to say "Let the People Vote" is really saying "Let Us Buy the Vote."
- The "They're-Going-Out-of-State-to-Gamble" narrative is a phony, endlessly recycled public relations strategy that gambling interests have used in almost every state in America to breathe artificial life into efforts to legalize casinos.
- State government shouldn't be telling people how to live by encouraging them to gamble at casinos, especially on games they are mathematically guaranteed to get fleeced. In the process, they are violating the rights and freedoms of the two-thirds of the public who almost never gamble yet are being forced to foot the bill for all of the costs and inevitable budget deficits produced by state-sanctioned gambling.

BACKGROUND

On behalf of the members of our United States network, we share this brief on governmentsanctioned regional casinos.

Stop Predatory Gambling's mission is to improve the lives of the American people with compassion and fairness, using education and advocacy to free us of the lower standard of living, exploitation, and fraud that commercialized gambling spreads.

A 501c3 non-profit based in Washington, DC, Stop Predatory Gambling is a national government-reform network of more than one million individuals and organizations.

We are one of the most diverse organizations in the United States, one in which conservatives work side-by-side with progressives for a common national purpose.

The First Truth: State government-sanctioned casinos lower the standard of living for everyone including those who never gamble.

 There is a direct connection between the widespread promotion and availability of state-sanctioned casinos with the financial hardship and lack of opportunity facing millions of American families today.

The Economist recently reported the American people had lost \$117 billion on statesanctioned gambling in 2016...in a single year.¹

As predatory gambling has spread into economically-distressed regions, the facts show it has lured far more citizens from the lower rungs of the income ladder. Low-income workers, retirees, minorities, and the disabled comprise a disproportionately large share of regional casino users.² One important reason for this is that those who are financially desperate look to state-sanctioned gambling as a way to improve their lives and help them escape their financial condition. It's become a Hail Mary investment strategy, one that dooms them to inevitable failure.³

This is a critical issue because asset-building, *the opposite of commercialized gambling*, is almost non-existent for nearly half the country's population; in 2010 less than half (46.9 percent) of households owned any stock at all — even indirectly through mutual funds and/or retirement plans.⁴ Less than one-third (31.1 percent) owned more than \$10,000 in stocks.⁵ The median African American and Latino family owns no stock at all.⁶

The most telling evidence of casino gambling's regressive effect may come from the casino operators themselves. The predominance of penny and nickel slot machines on the casino floors reveals who their target market really is.⁷ "High rollers" are not playing the penny slots.

• The economic impact of a slot machine is similar to throwing your money on the street so that someone else can pick it up — it's redistributing wealth without creating it.

The casino lobby feeds on the job insecurity of Americans because people, whether gambling or seeking employment, have fewer viable ways to make good money.

By relying on slot machines and other forms of gambling as its primary revenue source, a casino may employ some citizens but it doesn't produce economic growth.

Any activity the state puts money into will stimulate the economy. Government can stimulate the economy with good things, things that help people build wealth.

• Casinos leave behind far more gambling addicts than jobs.

We are told one of the primary rationales for state-sanctioned casinos is to "create jobs" but facts show that casinos leave behind far more gambling addicts than jobs. According to the most recent numbers made available by the Illinois Gambling Board, the total enrollment of citizens in the state's *voluntary* Self-Exclusion Program was 11,119 and the total number of full and part-time casino jobs was 7,137 - *almost 35% higher*. Thousands more gambling addicts have banned themselves from the state's casinos because their lives have been ruined than there are people who work inside the state's casinos.

But that figure is literally the tip of the iceberg. *The actual amount of gambling addicts created by state-sanctioned casinos is far greater than the number of citizens who have self-excluded*. That's because only about 10% of people experiencing problems with gambling seek help from problem gambling services- *90% never even come forward for help*.⁸

• "You Pay Even If You Don't Play:" For the two-thirds of citizens who never gamble, they end up paying higher taxes for less services and worse state budget problems over the long term. They foot the bill for the inevitable budget deficits produced by state-sanctioned gambling.

Some legislators continue to tout government-sanctioned gambling as a way to raise tax revenue. But history has shown repeatedly that this argument is either overstated or wrong. The facts about state-sanctioned gambling show that taxpayers end up paying higher taxes for less services and their states end up with worse budget problems over the long-term.

According to the April 2016 report by the Rockefeller Institute of Government at State University of New York-Albany: **"In the long-run, the growth in state revenues from gambling activities slows or even reverses and declines."**⁹

That's because income from casinos does not grow over time like general tax revenue. Yet expenditures on education and other programs will grow more rapidly than gambling revenue. **Thus, new gambling operations that are intended to pay for normal increases in state spending add to, rather than ease, long-term budget imbalances.**¹⁰

Also troubling for taxpayers, gambling operators are not allowed to fail by the state. For example, when casinos come up short, states usually provide new infusions of money, reduced taxes, reduced funding for gambling addiction measures, or other concessions such as lifting smoking bans and loss limits, in order to sustain revenues and profitability.¹¹ Rhode Island, Delaware, and New Jersey, to just name a few, have all taken special steps within the last few years to help casinos that might otherwise fail. Public tax dollars too often prop up gambling operators.

• State-sanctioned casinos create unfairness for other businesses.

When casino lobbyists call for a "limited number of casinos" to be allowed into a state, what they are really doing is attempting to rig the system to hand out special privileges to a few powerful political insiders at the expense of everyone else. Government, in this case, is not merely permitting private, consensual behavior. It is granting monopolies and awarding regulatory advantages to favored firms.

• All these facts and more explain why a recent statewide poll in New Jersey, a state that has bet big on casinos as much as any state outside of Nevada, revealed that "62% of NJ citizens said gambling has not been good for the state."

The December 2016 poll results, conducted as part of the Quinnipiac University Poll, were issued by a press release titled "Casinos Have Not Been Good For New Jersey, Voters Say; Many Would Leave Garden State If They Could."¹²

An astonishing 62 percent of respondents said casino-style gambling, legalized in New Jersey in 1976, has not been good for the state.¹³ Just 29 percent said they believe gambling has provided a benefit.¹⁴

Perhaps even more surprising is that 60 percent also believe gambling hasn't been beneficial for Atlantic City. $^{\rm 15}$

"Forty years after New Jersey voters approved casino gambling limited to Atlantic City, they say more than 2-1 that it was not the magic bullet it was cracked up to be," Quinnipiac University Poll Assistant Director Maurice Carroll said the press release. "And by wide margins, voters say casinos have not even helped Atlantic City."

Quinnipiac is a highly recognized polling program which conducts public opinion surveys in many states and the nation as a public service and for research.

The Second Truth: Casinos are predatory.

• A fundamental and irreconcilable conflict exists between the interests of state-sanctioned casinos and the public good: the state is charged with protecting the public from the very business practices that generate more revenue for the state. The aim has been *to maximize profits, not protect the public interest*.

One prime example of this conflict is how state-sanctioned gambling is exempt from truth-in-advertising laws enforced by the FTC. It has wide latitude in how it promotes gambling, exaggerating chances of winning and luring citizens to lose their money.

• It's a mathematically certainty that citizens will lose all of their money the more they continue to use slot machines. At the same time, these gambling machines are designed so citizens cannot stop using them, exploiting aspects of human psychology and inducing irrational behavior.

Every feature of a slot machine - its mathematical structure, visual graphics, sound dynamics, seating and screen ergonomics - is designed to increase a player's "time on device" – which means how long a person plays.¹⁶ Gambling operators found their profits were not about the size of the gamblers' stakes but the volume of their play.

"If you provide them with the right time-on-device, they will stay and play," one slot designer said. "If you take it too quickly and they lose, they're going to leave."¹⁷

The goal is to get every user "to play to extinction" — until all their money is gone. ¹⁸ "I want to keep you there as long as humanly possible," said another slot operator. "That's the whole trick, that's what makes you lose."¹⁹

The slot machine is designed to be so effective at extracting money from people it is "a product that, for all intents and purposes, *approaches every player as a potential addict* - ...someone who won't stop playing until their means are depleted."²⁰

This design is effective: *there are 11 different independent studies* that show 40%-60% of slot machine profits are taken from citizens who can't stop using them.²¹

• Because of the predatory practices of casinos, the health of millions of Americans has been and will continue to be severely damaged.

At least one out of every twenty citizens have had their lives turned upside down because they became addicted to gambling, *most of which was sponsored by state government*.²² This figure does not account for the reality that each gambling addict has at least 1-2 people close to them whose lives have also been upended.

The Third Truth: Casinos historically have been illegal in most places because they are a business that profits from fraud.

• The most revealing truth about the fraud behind state-sanctioned casinos is that nearly all of the people who run casinos and the public officials who lobby to bring them in, don't gamble themselves. Yet these hypocrites cause life-changing financial losses for millions of Americans.

The New York Times Magazine did a major cover story on electronic gambling machines. As part of their investigation, *The Times* reporter toured the Nevada headquarters of America's biggest gambling machine maker, International Gaming Technology. During the tour he asked IGT employees he met if they ever used the machines they made. The answer was no. One of the slot machine designers, when asked if he ever plays the machines he builds, "acted as if I had insulted him. 'Slots are for losers,' he spat."²³

Who are these "losers?" They are all of us.

Nearly every major casino executive, including at least three of the nation's biggest casino operators, MGM CEO Jim Murren,²⁴ Sheldon Adelson of Las Vegas Sands,²⁵ and Penn National Chairman Peter Carlino are not gamblers either.²⁶

• The casino gambling games are based on fraud.

The most profitable form of casino gambling, slot machines, are designed mathematically so users are certain to lose their money the longer they play. At the same time, the machines are literally designed so citizens cannot stop using them, exploiting aspects of human psychology and inducing irrational behavior.²⁷ Every feature of a slot machine - its mathematical structure, visual graphics, sound dynamics, seating and screen ergonomics - is designed to increase a player's "time on device" – which means how long a person plays.²⁸

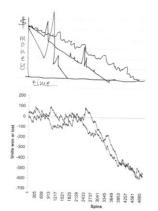

Figure 1: Addiction By Design by MIT Professor Dr. Natasha Schull, Pg. 112

Figure 4.2. *Top*: Projected play trends for three different games, assuming the same initial bankroll. The shortest line represents a game with "high volatility" and "low hit frequency"; the longest shows "low volatility" and "high hit frequency"; the middle line shows moderate volatility and frequency. Drawn for the author by game designer Nicholas Koenig. *Bottom*: Play outcomes for two simulated gamblers on the same gambling machine, set at a hold percentage of only 5 percent. The graph follows the two gamblers from their first bet through 5,000 spins, representing four to eight hours of play (depending on the speed of the machine and the speed of play). The downward slope illustrates the "churn" by which play funds are gradually croded over time. Although both gamblers experience wins, the house edge gradually consumes the winnings as they are reinvested in play. Assuming that each bets \$3.00 per spin, their averaged loss at the end of the play period is \$900.00. Graph built by gambling analyst Nigel Turner.

• The casino-promoted image of "responsible gambling" is a sham because the bulk of gambling profits is taken from citizens who are suffering.

The success of commercialized gambling enterprises depends upon people not being able to follow so-called responsible gambling guidelines. NYU Professor Natasha Schull reported in her acclaimed 2012 book *Addiction By Design* that people who follow responsible gambling guidelines *made up 75% of the players but contribute a mere 4% of gambling profits.*²⁹ "They only bring in 4% of our revenues, the responsible gamblers," the author of the study said. "If responsible gambling were successful then the industry would probably shut down for lack of income."³⁰

- When a practice is fraudulent, its advocates will speak of it fraudulently. They will call it by wrong names. They will allege that its purposes are other than what they are. They will engage in this fraudulent language partly to hide the fraud of the actual activity, and partly because they themselves are at least somewhat ashamed of what they are doing.
- Any political official who joins with the casino gambling lobby to say "Let the People Vote" is really saying "Let Us Buy the Vote."

It's disingenuous for anyone to say a fair debate leading to an informed, educated public will happen during a statewide casino referendum campaign because it won't. If every legislator in a state was outspent 3 to 1 during his or her campaign, most would lose reelection regardless of their merit. Yet some legislators allow casino operators to hijack the state constitutional ballot process by outspending predatory gambling opponents by a margin of at least 250 to 1. **How many sitting elected officials in any state would win a campaign if they were outspent by at least 250 to 1?** Here are a few examples of the massive spending that has occurred in other states:

- In Colorado, gambling interests outspent opponents 1,734 to 1. ³¹
- In Massachusetts, citizens collected signatures to place a casino repeal referendum on the 2014 ballot. Gambling interests spent more than \$15 million to defeat it.³² In the last 30 days, gambling interests including MGM ran more than 4000 TV ads. Repeal advocates ran zero because it was too costly to go on TV. In addition to the massive difference in ad spending, virtually none of the TV ads run by gambling interests even mentioned the word casino.³³
- In Maryland, another MGM-led casino campaign spent more than \$40 million to pass a statewide ballot question.³⁴
- In Ohio, gambling companies spent almost \$50 million to pass a ballot question allowing them to open casinos in the state.³⁵

• The "They're-Going-Out-of-State" narrative is a phony, recycled public relations strategy that gambling interests have used in almost every state in America to breathe artificial life into efforts to legalize casinos.

Gambling lobbyists simply position one state against another state, over and over again. To see this canned narrative in action, view these TV ads taken from recent lobbying campaigns in other states, highlighting the casino lobby's intent to deceive policy makers and citizens alike.

Maine, 2008: <u>http://www.youtube.com/watch?v=yRLhfxJxfGU</u>

The facts are that regional casinos take the bulk of their profits by turning local citizens who may have been going out-of-state a handful of times a year into everyday gamblers, losing their money inside casinos five times a week.³⁶ Why would any legislator vote in favor of their constituents losing money at casinos five times a week?

• State government shouldn't be telling people how to live by encouraging them to gamble, especially on games they are mathematically guaranteed to get fleeced. In the process, they are violating the rights and freedoms of the two-thirds of the public who almost never gamble yet are being forced to foot the bill for all of the costs and inevitable budget deficits produced by state-sanctioned gambling.

While citizens are free to engage in a financially damaging activity, state government has no business actively encouraging them. This is not a case of simply permitting private, consensual behavior as some public officials who support casinos attempt to argue. If it was their true intent, then this purpose could be achieved by allowing small, unlicensed games and keeping gambling private and local. Such an approach would be in line with the most effective and appropriate state stance toward gambling which is not encouragement, but rather containment.³⁷

In addition, what about the two-thirds of the public who almost never gamble yet their freedoms and rights are violated by being forced to foot the bill for all the costs and inevitable budget deficits produced by state-sanctioned gambling? (*See Truth #1.*)

What separates predatory gambling from alcohol, tobacco and similar activities is predatory gambling is a big con game. On the one hand, citizens are being conned into thinking they can win money on games they are guaranteed to get fleeced. On the other hand, all of the non-gamblers are being ripped off because they are footing the bill, experiencing worse public budget problems and a lower standard of living.
